Burpee's Spring Flowering Bulbs

FOR FALL PLANTING

OF ALL the flowers grown from bulbs, none are easier to grow than Tulips, Daffodils, Hyacinths, Crocus and the other kinds listed in this little book. Plant the hardy ones outdoors in the autumn, forget about them, and enjoy a grand display of flowers next spring when garden blooms are scarce. Often before the snow is gone, Snowdrops, Crocus, Chionodoxas, Scillas, etc., are in flower, followed by Hyacinths, Daffodils and Tulips until the end of May. In addition to outdoor planting, many are ideal, easily grown subjects for winter blooming in the house.

Order now. These bulbs must be planted in the fall; they are not available at any other season of the year.

Brief planting directions are given in this book; full cultural instructions are printed on the bags containing the bulbs. You may order 6 bulbs, any variety, at $\frac{1}{2}$ the 12 rate; 25 bulbs or more at the 100 rate.

BURPEE GUARANTEE

We guarantee the vitality and purity of Burpee's Seeds and Bulbs to the full amount of the purchase price. GIANT HYACINTHS

The Finest for Beds, Borders and for Growing Indoors

Among the many flowers that can be grown from fall planted bulbs, the hyacinth stands at the top of the list. It is probably the easiest flower to grow in pots or bowls, and what could be more decorative or attractive than a display of hyacinths in the house during the winter or early spring! Equally effective and beautiful are beds, borders or irregular groups here and there among perennials, in combination with pansies, forget-me-nots, English daisies, arabis, aubrietia and hardy alyssum, or in the front of shrubbery. We offer the best varieties.

Mammoth Size Bulbs for Giant Spikes

The spikes produced from Burpee's Mammoth Size Bulbs will be truly giant and well filled with large, showy florets. BURPEE'S LARGE FLOWERED HYACINTHS

For Beds, Borders or Pots, where large spikes are preferred

If large spikes are wanted for beds, borders or pots, the medium size bulbs offered below will be found most satisfactory. For the very largest spikes, either in pots or in the garden, plant the mammoth size bulbs offered on opposite page. If size of spike is not important, plant medium size listed on this page.

Medium Size Bulbs for Large Spikes

The spikes produced from Burpee's Medium or so-called Bedding Size Bulbs will be a little smaller than the giants, but just as pretty; the selection of varieties is the same. Many gardeners prefer them because of the saving in price. They will make a fine showing.

HOW TO GROW TULIPS

Outdoors: Tulips should not be planted in soil in which they had been grown the last two seasons. Select a new location in a sunny position. Do not use fresh manure at planting time; well-rotted manure or bone meal may be worked into the soil which should be well drained. Plant bulbs 5 to 6 in. deep and 6 to 8 in. apart.

Indoors: A mixture of ⅔ good clean garden soil and ⅓ leaf mold to which a little bone meal has been added will give the best results. A 6-inch pot will hold about 6 bulbs. Place bulbs about 1 in. apart each way. Cover with an inch of soil and water thoroughly; then put pots in a coldframe or heel-in in the garden for 8 to 10 weeks to force root development. Bring pots indoors, first in a cool location and gradually to the average living room temperature.

The chief characteristics of Giant Darwin Tulips are the attractively shaped flowers, tall stems, and lovely colors—scarlet, crimson, rose, pink, violet, purple, slaty blue, blue-violet, lavender, white, golden yellow, etc. They are wonderful for planting in masses in beds, borders or in groups of twelve or more here and there among the hardy perennials, and what could be lovelier for cutting?

If the widest assortment of colors is desired in late tulips, the Giant Darwin, Ideal Darwin, Lily Flowered, Breeder and Cottage varieties should be included in your plantings, as each class has its own range of colors, and all usually bloom during May. The height given for each variety is average and some variation is natural in different localities and seasons. We offer a choice selection of better varieties.

COTTAGE TULIPS

Cottage or May Flowering Tulips are, perhaps, the most permanent of all tulips, blooming in early May, hence the name, "May Flowering." The term "Cottage" is of recent origin, and so called because so many were planted around the country homes and cottages of England. As a class, they are rich in the more delicate and artistic shades of yellow, orange, fawn, salmon, old rose—colors missing to a great extent in other late tulips.

Cottage Tulips are as varied in their range of colorings as the Darwins and are mostly long and oval-shaped; those with gracefully reflexed petals are offered separately as Lily Flowered, page 14. Stems are long and not so stiff as the Darwins or Breeders. Excellent for cutting and unsurpassed for garden decoration. Planting directions are on every bag containing the bulbs.

CHAMELEON TULIPS

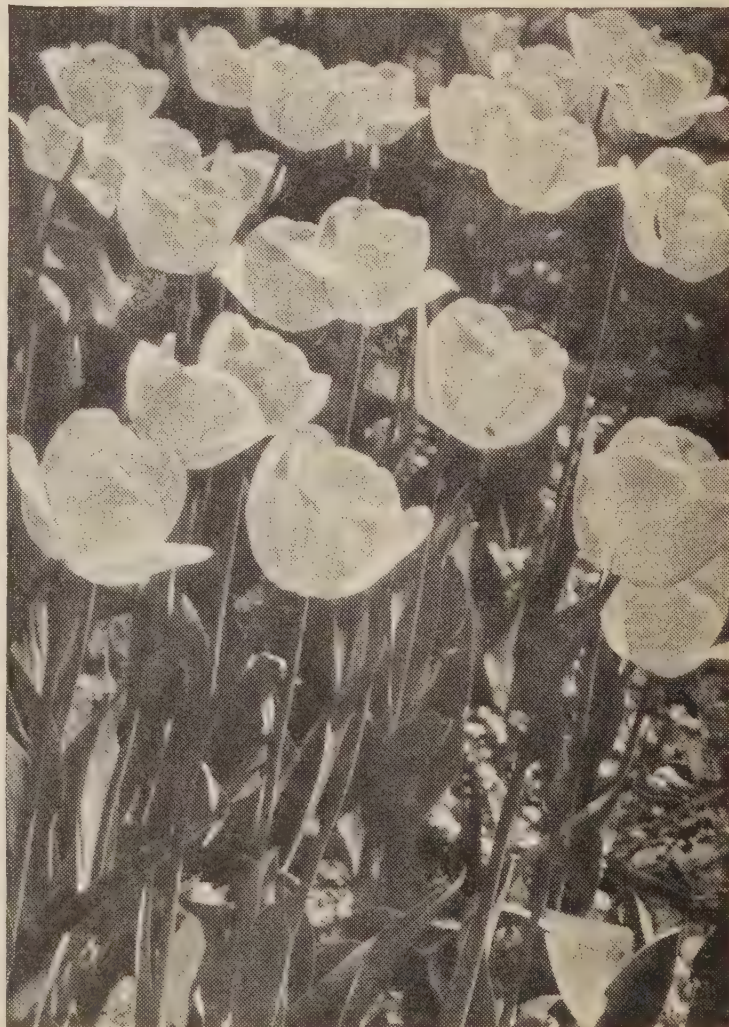

In shape and habit of growth, these resemble the Darwins, but the colorings remind you of the Cottage Tulips. Rather than list them with either class, we are keeping them separate so you will not miss them. When first opening, the flowers are white with faint red or pink markings on edges of petals. As flowers age the pink or red suffuses over entire surface so that the colorings change from day to day, hence the appropriate name "Chameleon." Their ever-changing colorings are a constant delight and create a lovely effect in the garden or as cut flowers. Flower in May outdoors; can be forced for blooming indoors in February.

3 for 50¢; 12 for \$1.75; 100 for \$12.00

CHINESE LANTERN TULIPS

9336 Good Gracious This tulip is so distinct that instead of listing it with the Cottage or May-flowering group we are offering it separately so it will not be overlooked. Flowers are of good size, globular and glow with such an iridescent sheen as to create the effect of a delicately colored, lighted Chinese Lantern. The color is rather difficult to describe: a glorious combination of pink, salmon, orange and yellow gives the general effect of brilliant orange; inside is a brighter orange with a contrasting yellow base. Superb for garden and cutting. 25 in.

Narcissus or Daffodils

In a general way, daffodil and narcissus mean the same thing; daffodil is the common name and narcissus the botanical name. Common usage among garden makers in this country has applied the term daffodil to the giant trumpet varieties, while the smaller or medium trumpet, as well as the cluster-flowered and poet's types, are referred to as narcissus. Botanically, these smaller or medium trumpet daffodils are the barri, incomparabilis, leedsi, poeticus, poetaz, polyanthus and miniature types. To avoid confusion, we are listing all of these classes as daffodils. Some gardeners apply the name jonquil to the giant trumpet daffodils, but this is misleading, as the true jonquils and campernelles are small-flowered and sweet-scented; showy when massed in beds, borders or naturalized. Their delicious fragrance makes them indispensable for cutting.

As daffodils bloom early, last a long time, and may be had in so many lovely varied forms, they have few equals as garden flowers. They are most desirable for any garden purpose—in masses, in beds or borders, in groups of twelve or more here and there in the hardy perennial border, or in the foreground of shrubbery. For naturalizing in large quantities, no other flower is more suitable. Ideal, easily grown subjects for winter blooming in the house, especially the paper white and soleil d'or narcissus which will be found listed on page 31.

Brief cultural directions for the growing of daffodils indoors and outdoors are given on page 18; full directions are printed on every bag containing the bulbs. Daffodils are easy to grow and require little care.

HOW TO GROW DAFFODILS

Outdoors: For best results plant bulbs as early in the fall as possible, 4 to 8 in. deep and 6 to 10 in. apart; the exact distances depend on the size of the bulb and the nature of the soil. In very cold locations, after the ground is frozen hard, cover with leaves, straw or coarse litter to a depth of 4 to 6 in.

Indoors: Put several bulbs, about 1 in. apart (same variety) in a pot, barely cover the bulbs with soil, water thoroughly and put in coldframe or heel-in in the garden for 8 to 10 weeks to force root development before bringing indoors for winter blooming. Full cultural directions on bags containing bulbs.

MEDIUM TRUMPET DAFFODILS

On this and the next page we offer a choice assortment of daffodils whose trumpets are not so long as the perianth segments. In this group, where the trumpet is greatly reduced in size and cupped, we refer to it as a "cup"; where trumpet is shortened but expanded or broadened, we call it a "crown" and where very small and flattened, an "eye." We offer the very best varieties.

The Medium Trumpet class is divided into three groups—Incomparabilis, Barri and Leedsii. These divisions are based mainly on the relation of the perianth to the trumpet, crown or cup; an explanation is given under each group as to its distinguishing characteristics.

INCOMPARABILIS DAFFODILS

Trumpets, crowns or cups measure from one-third to less than the length of the perianth segments. The largest red-crowned varieties are found in this group; they are brightest when grown in semi-shade. Showy in all garden plantings and ideal for cut flowers.

300x48 Book—Garden Bulbs in Color

The most practical book on bulbs ever written. 275 photographs in full natural color. 100 photographs in black and white. Beneath each illustration of spring and summer flowering bulbs is a brief description of plant, its origin and suggestions for its use in the garden and directions for its cultivation. 296 pages. \$3.49 each

BURPEE'S HARDY GARDEN LILIES

Easy to grow in any good, well-drained garden loam to which has been added a generous quantity of leaf mold. Once established, they will increase in beauty each year. Most all lilies delight in a sunny location, but it is advisable to mulch so that the hot sun does not reach the soil around the base of the plant. All varieties offered are highly decorative in the border, while the dwarfier ones also give a charming touch of beauty to the rock garden. Lily bulbs differ greatly in size according to variety, some 1 in. across, others 3 in. or more; we supply the sizes which will give the best results. We do not recommend hardy lily bulbs for house culture; for this purpose, plant the Easter Lilies offered on page 31 which also may be grown outdoors in sections where winters are mild.

Regal Lily

REGAL LILY—(*Lilium regale*)

Gorgeous, bell-shaped, white, sweet-scented flowers with a touch of canary-yellow in the throat and a shading of lilac-pink on the outside. Clusters of blooms at the top of tall, wiry stems during July. One of the most beautiful and easiest grown of all lilies, the individual flowers measure about 6 in. in length and 4½ to 5 in. across. Grow 3 to 5 ft. high.

8631 LARGE BULBS These will produce many more flowers per plant the first year than the medium size bulbs.
60¢ each; 3 for \$1.35; 12 for \$5.00

8632 MEDIUM SIZE BULBS Guaranteed-to-bloom bulbs,—the economy size preferred by many for the largest number of flower spikes at low cost. At these low prices, a splendid opportunity is afforded you to plant this beautiful hardy garden lily in quantity. More floriferous with age.

SPECIAL: 3 for 25¢; 12 for \$1.00; 100 for \$8.00

It will, however, do well in any good garden soil but will do better if soil is mixed with leaf mold such as is found in the woods. Ideal for naturalizing. Grows 3 ft. and more tall.
40¢ each; 3 for \$1.00; 12 for \$3.60; 25 for \$6.50

Delivery of Hardy Garden Lily Bulbs

Hardy Garden Lilies are sent you in the fall just as soon as they are thoroughly cured and in the proper condition for planting. Some varieties will not be ready until November or early December. Plant them in the garden as soon as possible after they are received. If you live in a locality where the soil freezes early, we suggest that you cover the ground with manure, leaves, straw, etc., to prevent it from freezing. When lily bulbs arrive, remove covering and plant them immediately. Do not put the covering back over the bulbs until after the ground has frozen hard. The purpose of the covering is to keep the ground frozen so that alternate freezings and thawings will not injure root growth during the winter. Remove covering in spring.

SPRING FLOWERING CROCUS

9527 Giant Flowered Crocus, Mixed Colors 12 for 60¢; 100 for \$4.00; 200 for \$7.50

Crocus will grow in many places—in the lawn, flower borders, rock gardens, edge of shrubs, on the slopes of terraces, in sun or shade, and even under trees. For showy effect, plant bulbs 3 to 4 in. apart, 2 in. deep. To avoid formal arrangements when planting in the lawn, scatter the bulbs and plant them where they fall. In borders, double rows 6 in. apart with the bulbs spaced 3 in. apart in each row are very showy; such ribbon arrangements are most striking. Do not plant in heavy, wet soil; a well-drained, rather dry and fairly rich soil will give the best results.

Indoors: Plant 8 to 10 bulbs 1 in. deep, 2 in. apart, in a 6-in. container using light sandy soil to which bone meal has been added; water well and set in a cool cellar for about 6 weeks so that bulbs will become well rooted. When top growth has begun, bring them to the light. Keep in a cool location and gradually bring to a sunny position where it is not too hot.

Neat, compact plants with long, stiff-stemmed, showy flowers in many charming colors, such as blue, rose, scarlet, white, etc. Bloom in May and June. Plant bulbs 3 in. deep and 6 in. apart in a cool, moist, but well-drained soil. Require winter protection north of Washington, D. C., unless they are planted in a very sheltered location. In northern states, or in any cold section, we do not advise outdoor fall planting; it is better to wait until spring. In southern states, fall planting is best. Fine for pot culture, borders and rock gardens. Ideal for cutting, 1 ft.

Our mixture contains a wonderful range of colors—yellows, from straw to deep golden yellow; all shades of red; orange; pink; many ringed and tipped with a deeper color. Do best in a shady location and in moderately rich soil. Fine for cutting. Not reliably hardy north of Washington, D. C., except in warm, sheltered locations. Splendid for growing in frames or pots. Set roots, claws downward, 2 in. deep, 4 to 6 in. apart. If grown in pots, plant 6 to 8 roots in a 6-in. pot; cover roots with 1 in. of soil, and allow 2 in. of space between them. Ranunculus roots are small and resemble tiny clumps of dahlias. 3 for 20¢; 12 for 65¢; 100 for \$4.50

In northern states, or in any cold section, we advise waiting until spring to plant Ranunculus and Anemone bulbs outdoors. Both of these classes, however, are suitable for indoor winter culture or growing in frames.

POLYANTHUS NARCISSUS

Popular for growing in the house during the winter and early spring, either in soil or in pebbles and water

One of the easiest flowers to grow. Best results are obtained if your first plantings are not made until after October 15. To have a continuous display, make successive plantings two or three weeks apart. We suggest you order enough bulbs early, as they will keep in perfect condition if put in a cool, dry place until needed for planting.

Water Culture: Put an inch or two of sand or pebbles in bottom of dish; set the bulbs upright and place sufficient pebbles around them to hold them in place. Fill dish with water and set in a dark, cool room until plenty of roots have formed, after which bring to a light but cool, free from frost, place. Polyanthus Narcissus may also be grown in soil. **They are not suited to garden planting** except in frostless localities.

9460 Paper White Grandiflora

The large, pure white, sweet-scented blooms are borne in clusters and are highly prized for their beauty, fragrance, and the ease with which they can be grown. This accounts for the universal popularity of Polyanthus Narcissus for indoor decoration during the winter.

LARGE BULBS: 12 for \$1.00; 100 for \$7.50

9459 Soleil d'Or—Golden Yellow Narcissus

Often called the "Yellow Paper White," the sweet-scented blooms being rich golden yellow with a deep orange-red cup. May be grown, like Paper Whites, in water and pebbles, but do best when grown in soil. Full cultural directions are on the bag containing the bulbs.

LARGE BULBS: 3 for 45¢; 12 for \$1.60; 100 for \$11.00

GIANT FLOWERED FREESIAS

One of the most fragrant of our indoor winter flowering plants. Bulbs are rather small; a 6-in. pot or pan will hold about a dozen. Use good fibrous, sandy garden loam. Set bulbs upright, allowing about 2 in. space between them, and barely cover with soil. In flower from January onwards and for best results must be grown in a moderately low temperature. The largest flowers and the longest stems are usually had from the earliest plantings.

EASTER LILIES

We offer two varieties that are *ideal for indoor growing*. Use a 5- or 6-in. pot; place bulb loosely in rich, porous soil so that it is barely covered and the soil gently but firmly set. Keep in a cool, dark but airy place, free from frost, until bulbs are well rooted; afterward bring to the light and grow on in a temperature of not more than 60° F. Ideal garden subjects in frost-free locations. In other sections, after having bloomed in the house, they may be planted outdoors for flowering during the late summer. Admired by everyone.

BERMUDA EASTER LILY

(*Lilium harrisi*) Quick to come into bloom; may be forced for Christmas, but it is for Easter that it is so extensively planted. The plants grow about 3 ft. tall and produce 5 to 12 or more large, trumpet-shaped, fragrant, waxy white blooms with contrasting yellow anthers. Our bulbs are genuine Bermuda grown; they usually reach us in August and are usually available from then until December.

8602 LARGE BULBS: Well grown, they produce 5 to 10 large flowers per plant.
